Competitions
and Practice

Solving
Problems

- Learn algorithms and data structures
- Develop problem solving ability
- Practice implementing algorithms in C++
- Practical evaluation of code correctness and running time
- Prepare for programming competitions

- It's fun
 - Most of the time
 - For those who enjoy a challenge
- Become part of a community
 - Rapidly growing at UNSW
 - Active society ([CPMSoc](#))
- Develop your skills
 - Learn to solve *self-contained* problems *quickly* and *accurately*
 - The exact skills required in most technical interviews!

- Significant programming experience in C or C++
- Understanding of fundamentals from *Data Structures and Algorithms*
 - Arrays, structs, heaps, merge sort, BSTs, graph search, etc
- *[Extended] Algorithm Design and Analysis*, although most content will be reintroduced
- Most important: enthusiasm for problem solving

Introduction

Admin

Classes

Assessment

Changes

Competitions
and Practice

Solving
Problems

- Problem Solving Paradigms
- Data Structures
- Dynamic Programming
- Graph Algorithms & Shortest Paths
- Network Flow
- Mathematics
- Computational Geometry

There is a tentative [course schedule](#) on the website.

Solving
Problems

- Tue 16:00 – 18:00 at Old Main 150
- Fri 14:00 – 16:00 at June Griffith M10
- Live streams and recordings on Echo360, via Moodle

Introduction

Competitions
and Practice

Solving
Problems

- Lectures for each topic will present the theory, and apply this to some example problems
- Any code in lectures will be in C++
- Slides will be available before each lecture
- Please ask questions at any time if anything is unclear

Competitions
and Practice

Solving
Problems

- Weeks 1–10:
 - Tue 14:00 - 15:00 and Fri 13:00 – 14:00 at my office (K17 202)
 - Email me for other arrangements (remote and/or other times)
 - I'm not usually on campus other than Tuesday and Friday
- Additional consultations during STUVAC and the exam period, schedule TBA

Introduction

Admin

Classes

Assessment

Changes

Competitions
and Practice

Solving
Problems

- All face to face
- See [timetable](#) for rooms

Introduction

- 120 minute workshop
 - Two to four example problems based on recent lectures
 - Work through problem sheets in small groups
- 90 minute lab
 - Work on the weekly problem sets with your classmates
 - Tutors will help you with the problem sets and other questions
 - Close the loop on problem diaries

Classes

Assessment

Changes

Competitions
and Practice

Solving
Problems

- A set of 5 problems will be released each week except week 6
- Problem sets are conducted on [vjudge](#)
 - Make an account using your zID as the username
 - [Join our group](#)
- Suggested timeframe is two weeks

Introduction

Admin

Classes

Assessment

Changes

Competitions
and Practice

Solving
Problems

- Worth 5% each, drop the lowest, for a total of 40%
- Marks are awarded non-linearly. As a rough guide:
 - for PS, aim for 1 per set
 - for CR, aim for 2 per set
 - for DN, aim for 3 per set
 - for HD, aim for 4 per set

Introduction

Competitions
and Practice

Solving
Problems

- Some problems will take you minutes, others will take you days
- Work together
 - You are encouraged to discuss problems and share test cases
 - Code must be derived and written individually
 - Acknowledge any collaboration in a header comment
 - Review [plagiarism policy](#)

Introduction

Admin

Classes

Assessment

Changes

Competitions
and Practice

Solving
Problems

- No deadlines, no late penalties
- Special Consideration *not* required
- Don't fall behind!
- Contact me and your tutor if you experience interruptions to your studies

Introduction

- Brief notes, usually much less than a page (excl code snippets) explaining:
 - your problem-solving process,
 - any challenges you encountered and
 - how you overcame them.
- Write about every problem up to your target grade, whether you solved it or not
- No need to give detailed descriptions or proofs as in the Algorithms courses
- With meta-reflection, worth 8%

Solving
Problems

- An account will be made for you on [CMS](#), email coming soon with credentials
- Individual (unlike ICPC)
- Aims:
 - practice coding in a time-constrained environment
 - practice solving problems using a variety of available techniques
 - prepare for the final exam

Introduction

Admin

Classes

Assessment

Changes

Competitions
and Practice

Solving
Problems

- At the end of week 1, you will undergo a timed contest with 5 problems, to be completed within 48 hours
- No new material will be tested; only COMP2521 knowledge (e.g. sorting, recursion) is needed
- Test whether your programming fundamentals are sufficient to proceed to the later stages of the course
- We recommend that you try to complete the task within a shorter time frame, say 5 hours, but the full time is available in this case to minimise stress for you

Introduction

Admin

Classes

Assessment

Changes

Competitions
and Practice

Solving
Problems

- In weeks 6 and 9, you will undergo a timed contest with 3 problems
- Contest will be open for 48 hours; you have three hours from when you click 'Start'
- Further details will be released closer to the date of each contest
- Each problem will be worth 100 points and have a 50 point subtask
- Marks are awarded non-linearly. As a rough guide:
 - for PS, aim for 50 points
 - for CR, aim for 100 points
 - for DN, aim for 150 points
 - for HD, aim for 200 points

Introduction

Admin

Classes

Assessment

Changes

Competitions
and Practice

Solving
Problems

- The final exam will be a timed contest with ~ 7 problems, to be completed within ~ 5 hours
- Held at CSE labs, prewritten code allowed
- Further details will be released closer to the date of the exam

Competitions
and Practice

Solving
Problems

- Problem statement, describing the problem using flavour text
- Input and output specification
- Constraints
- Time limit (usually 1s) and memory limit (usually enough)
- Sample testcases, sometimes with explanation

Introduction

Admin

Classes

Assessment

Changes

Competitions
and Practice

Solving
Problems

- Your program will first be compiled
 - If this fails, you get `COMPILE-ERROR`
 - C++ compile errors are notoriously opaque
- Your program will then be run on the sample testcases and several secret testcases, including
 - large cases for stress testing
 - edge cases to catch bugs

- There are several reasons for your submission to be unsuccessful
 - **WRONG-ANSWER:** your program produced incorrect output for at least one test case
 - **TIME-LIMIT:** your program exceeded the time limit for at least one test case
 - **RUN-ERROR:** many possible reasons, but most commonly because your program crashed for at least one test case
 - If more than one of these apply, you could get any of them (depends on the judge)
- The **CORRECT** verdict is given if your program produced correct output within the time limit for every test case

- Read the problem statement
 - Reformulate and abstract the problem away from the flavour text
 - Check carefully for any special conditions which might be easy to miss – seemingly small changes to the statement can change the problem greatly
- Identify the input and output specification and any constraints that apply
- Confirm your understanding of the problem using the sample cases

Introduction

Admin

Classes

Assessment

Changes

Competitions
and Practice

Solving
Problems

- Design an algorithm to solve the problem
 - Estimate the runtime of your algorithm
- Implement the algorithm
 - Test the implementation
 - Debug the implementation – often the most time consuming step
- Submit!

- **Problem statement** Alice and Bob are two friends who are visiting a milk bar. The milk bar is owned by the crotchety old Mr Humphries. If Alice buys A dollars worth of items and Bob buys B dollars, how much must they pay in total?
- **Input** Two integers, A and B ($0 \leq A, B \leq 10$)
- **Output** A single integer, the total amount Alice and Bob must pay.

Introduction

Admin

Classes

Assessment

Changes

Competitions
and Practice

Solving
Problems

- **Problem** Output $A + B$

- **Algorithm** Calculate $A + B$, and then print it out.

- **Complexity** $O(1)$ time and $O(1)$ space

- **Implementation**

```
#include <iostream>
using namespace std;

int main() {
    // read input
    int a, b;
    cin >> a >> b;

    // compute and print output
    cout << (a + b) << '\n';
}
```
